

Data Tables Drill-Down for Statistical Data

You may change the year for the dashboard or see the data used for the computations in the dashboard reports under the “Data” button near the top left of each dashboard. Click on the button and click on the arrows next to the titles until you see a list of years (i.e. FY2007, FY2008, etc.). Click on a year to change the data in the dashboard report to reflect the statistics for that year. Click on the dog-eared symbol to the left of a year to bring up a new window with the data tables used for the dashboard computations, as well as additional data for comparison, such as age groups and race at the state level.
